Ken

Thank you, I have reviewed and asked for other input and the consensus is that is good as written. I do think that human health also needs to be addressed. Instead of adding a paragraph for human health, would it be more appropriate to write a separate memo for human health since it was done in a separate document? I do not have a problem with either approach. I will forward the SLERA and your memo to TCEQ if you are ok with it in its current form, if not I will just forward the SLERA and Human Health screening to my counterpart and Vicky Reat at TCEQ.

Have a great weekend!

Here is the first draft version. Let me know if you want changes. I did not address human health risk in this document, but I can add a paragraph on human health risk if you think it would help. We should probably send this to the TCEQ risk assessor as well. I think it is Vicky Reat. It would help if she is willing to sign off on this decision as well.
